DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of compound of example 30, (S)-[3-(2,4-Dichlorophenoxy)-hexyl]-methanamine, in the reply filed on August 20, 2007 is acknowledged. In view of Applicant's response and amendment to the claims, the restriction requirement between Groups I-X dated July 20, 2007 is withdrawn.

2. Claims 7 and 21 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected subject matter: the claims reading on the elected species are 1, 6, 8, 15 and 33.

3. MPEP § 803.02 provides guidelines for election of species in Markush-type claims. These guidelines were followed for the search and examination detailed herein.

The elected species was not found to be allowable. Therefore, the Markush-type claims were rejected and the subject matter drawn to nonelected species held withdrawn from further consideration. The provisional election of species was given effect and the search was limited to the elected species. Claims 1, 6, 8, 15 and 33 were further examined, pursuant to MPEP § 803.02, to the extent necessary to determine patentability.

Information Disclosure Statement

4. The information disclosure statement (IDS) submitted on August 9, 2006 was in compliance with the provisions of 37 CFR 1.97 and 37 CFR 1.98. Accordingly, the information disclosure statement was considered. A signed copy of form 1449 is submitted herewith.

Claim Objections

5. Claims 1, 6, 8, 15 and 33 objected to for containing non-elected subject matter.
6. Claims 6 and 7 objected to because of the following informality: the claims do not end with a period. Appropriate correction is required pursuant MPEP § 608.01(m).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
 2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
7. Claims 1, 6, 8, 15 and 33 rejected under 35 U.S.C. 103(a) as being obvious over Cheshire et al. (WO 01/62714). See, for example, compound on page 6 line 14.

Determination of the scope and contents of the prior art.

The references teaches the following compound which is an inhibitor of nitric oxide synthases.

Art Unit: 1626

Ascertaining the differences between the prior art and the claims at issue.

The difference in the prior art compound to the instantly elected species is the following: the chloro substituents are on the 2 and 4 positions of the phenyl ring for the instantly elected compound; the equivalent substituents are on the 2 and 5 positions for the prior art compound. The instant election is a positional isomer of the prior art compound.

Resolving the level of ordinary skill in the pertinent art – Prima Facie Case of Obviousness.

Position isomers are generally of sufficiently close structural similarity that there is a presumed expectation that such compound possess similar properties. MPEP §2144.09, *Ex parte Henkel* 130 USPQ 474, (1-phenyl-3-methyl-4-hydroxypyrazole obvious over reference teaching 3-phenyl-5-methyl-4-hydroxypyrazole). *Ex parte Weston*, 121 USPQ 429.

One of ordinary skill would be motivated to make the modification required to arrive at the instant invention with reasonable expectation of obtaining a compound that is an inhibitor of nitric oxide synthase. The motivation would be to make alternate compounds that are inhibitors of nitric oxide synthase.

Thus, the instant claims are *prima facie* obvious over the teachings of the prior art.

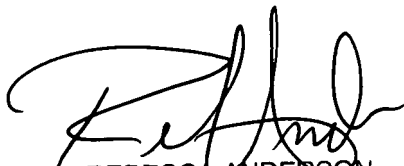

Conclusion

8. No claims allowed.
